

Let's Code Your Career through Programming

Must Practice:

1. [Javascript crash course](#)

Target of Day 15:

5 Practice problem:

1. Sum of Two Numbers

- **Problem:** Write a JavaScript function that takes two numbers as parameters and returns their sum.
- **Objective:** Practice writing a simple function and using parameters in JavaScript.

Sample Input	Sample Output
3, 4	7
15, -3	12

2. Even or Odd

- **Problem:** Write a JavaScript function that determines whether a given number is even or odd.
- **Objective:** Learn to use conditional statements (if-else) in JavaScript.

Sample Input	Sample Output
4	Even
-11	Odd

3. Find the Maximum

- **Problem:** Write a JavaScript function that finds the maximum value among number.
- **Objective:** Learn how to iterate through an array and find the maximum value.

Sample Input	Sample Output
3, 4	4
1113, 1112	1113
0, 0	None

4. Sum of Array Elements

- **Problem:** Write a JavaScript function that calculates the sum of all elements in an array.
- **Objective:** Practice using loops to iterate through an array and perform a basic operation.

Sample Input	Sample Output
1, 2, 3, 4, 5	15
10, 13, 9, 32	64

5. Array Filtering

- **Problem:** Write a JavaScript function that filters out even numbers from an array and returns a new array containing only the odd numbers.
- **Objective:** Practice using loops and conditional statements to filter and create a new array.

Sample Input	Sample Output
1, 2, 3, 4, 5	1, 3, 5
3, 9, 0, 12, 11	3, 9, 11
